TERREMARK COMMITS TO HALF-TURBINE RENEWABLE POWER PURCHASE FROM SILICON VALLEY POWER

SANTA CLARA, Calif. – September 6, 2007 – Silicon Valley Power (SVP), the City of Santa Clara's municipal electric utility, has added another large member to **Santa Clara Green Power**, its 100 percent renewable energy program. Terremark Worldwide, Inc. (NASDAQ: TMRK), a leading provider of managed IT infrastructure services, will purchase one half of the output of one large-scale wind turbine, or 1,608 megawatt-hours (MWhs), annually for its facility in Santa Clara.

"Terremark is committed to finding innovative and reliable sources of energy that will continue to provide our customers with high-quality service while also limiting the environmental impact of our facility," says David Layton, Senior Vice President, Operations for Terremark. "By purchasing clean energy from **Santa Clara Green Power**, we will reduce the carbon dioxide emissions associated with our Santa Clara facility and help to protect the environment for future generations."

Terremark's commitment will prevent the emission of more than 641 tons of carbon dioxide annually, equivalent to planting 534 acres of trees or taking removing 139 cars from the road per year. This purchase makes Terremark's Santa Clara facility a member of the U.S. Environmental Protection Agency's Green Power Partnership.

“Santa Clara Green Power makes it easy for businesses within Silicon Valley Power’s service territory to support clean energy derived from wind and solar resources, but the desire for clean energy needs to come from the company,” says Joyce Kinnear, Public Benefits Program Manager for SVP. “Terremark’s participation in Santa Clara Green Power demonstrates its commitment to reducing its carbon footprint and makes Terremark an environmental leader in the community.” Terremark joins the growing list of more than 130 businesses and close to 4,000 households participating in **Santa Clara Green Power**.

SVP will purchase renewable energy credits on behalf of Terremark’s Santa Clara facility from newly constructed wind farms and solar photovoltaic projects located within California. A portion of Terremark’s **Santa Clara Green Power** rate supports new solar facilities in the City of Santa Clara, such as Haman Elementary School and the newly installed Valley Village Retirement Community.

About Silicon Valley Power

Silicon Valley Power is the trademark adopted for use by the century-old Electric Department of the City of Santa Clara, California. SVP provides power to more than 50,000 customers, including Applied Materials, Intel, National Semiconductor and Yahoo!, at rates 25 to 45 percent below neighboring communities. SVP also offers customers a 100 percent renewable energy option through its **Santa Clara Green Power** program and is an active participant in the wholesale energy markets in the Western United States. Visit www.siliconvalleypower.com for more information.

About Santa Clara Green Power

Santa Clara Green Power is a voluntary renewable energy program offered by Silicon Valley Power to all of its residential, commercial and industrial customers as a way to support energy generated from 100 percent clean wind and solar power resources at a low additional cost of 1.5 cents per kilowatt-hour. Santa Clara utility customers can enroll in **Santa Clara Green Power** by signing up through the secure website at www.siliconvalleypower.com; sending an email that includes the customer's name, address, account and phone number to green@siliconvalleypower.com; or by calling (408) 244-SAVE (7283).
